

### **Team contract**

#### **Team:**

Zulsar Batmunkh (zulsar)  
Jonathan Lim (dhlim)  
Dana Mukusheva (mukushev)

#### **Goals:**

Our primary goal is to implement a working stable version of pingball.  
Our personal goal is to become a better programmer and use concepts we learned in class. Specifically, we want to practice integrating and reusing code to match new specifications.  
We will get a hundred on this project no matter what.  
We shall do our best.  
Communication is key.

#### **Meeting norms:**

Saturday: starting 1 p.m. Student Center Reading Room  
Sunday: afternoon  
Weekdays to be determined.  
We will wake up in time for class times and get some help from TAs

#### **Work norms:**

Comment every single code and variable and commits  
Work on different classes at a time to avoid merge conflicts  
If you have something due for another class, work extra hard the next day.  
For merging the project (initial distribution of work):  
Zulsar—parser  
Dana—ADT  
Jonathan—Server/Client

Later on, we see how it goes.  
When we have different opinions, we go with the majority rule.  
We shall work consistently and try not to cram the day before.

#### **Decision-making:**

Don't delete anything. Just comment it out.  
Read every line of code, even the ones that are not yours.
